SECOND COPY,
1893.

PREFACE.

In 1893 a book similar to this one was issued for the lumber trade. It is now in use by both wholesalers and retailers in every state of the Union, and I have hundreds of letters on file stating that the writers would not part with their copy for \$100 if they could not get another one. In order that every possible error might be found and corrected I offered \$2 50 *cash*, or a cloth covered book, to the person first reporting each error. I now repeat that offer for 'The Coalier's Actuary, it being understood that errors of 1 cent and under shall not be regarded.

Your critical attention is invited to the following pages. Notice the alternate columns of light and dark-faced figures—so arranged that you can't look in the wrong place, even with eyes only half open. The cut-in index is hand made and, in general, you will find the work more than equal to that in the most expensive books published. In expectation of large sales The Coalier's Actuary is offered to the trade at the following prices:

Flexible cloth binding, delivered\$2.50 net.

Full leather binding, delivered 3.00 net.

EQUIVALENTS.

Down the center are the prices per ton, and to the right and left the equivalent prices per bushel of 75, 70, 56, 60, 32, and 48 pounds respectively. For example, a load of ear corn weighs net 1980 pounds. What is its value at 28 cents a bushel of 70 pounds? The equivalent of 28 cents for 70 pounds is \$8 a ton, to which page turn and read the correct amount, \$7.92, without even reducing to bushels.

To change from short to equivalent price per long ton add 12% to the short, thus: short 5.80 × .12 = .696. 5.80 + .696 = 6.50 long.

To change from long to short, approximate rule: Deduct the first two figures at the left, plus the first, minus one, thus: long 6.40 — (64 + 6 -- 1) = 5.71 short.

Storage—to arrive at space required, or in **invoicing** to arrive at quantity in bin or pile:

	Cubic feet to the net ton.	Weight per cubic foot, pounds.
